I pick a Cyclone. I think the naming thing is a bit weird and some people probably find it irritating, but I've always found it pretty effective. I fit the plane, and one of the new-fangled glide mods that the doc came up with to smooth out the controls when gliding. I look back at the team and ask if they're happy with the choices I've made, and they are. They've got that good feeling with the new system, knowing that it's just about there. The first test run isn't ideal; the copter and the plane both have a single-use refuelling.

What's New in the AutoCAD?

The Markup Assistant makes it easy to annotate drawings with handwritten notes. Add text, arrows and boxes to drawings with the Markup Assistant. Also, mark up CAD files using the Markup Assistant. (video: 1:20 min.) The Markup Assistant works great with two-dimensional annotations. Now, you can also mark up annotations on multi-dimensional drawings using the Markup Assistant. (video: 1:30 min.) Using the Markup Assistant, you can easily add notes, comments, or reminders to your drawings, without the need to open files in separate applications. You can even annotate and mark up CAD files. (video: 1:45 min.) Improvement in the Ruler tool to support mid-document scaling of drawings. Enhancements in Layout and Arranging: Create new shapes and control their properties from a single click with Shape Properties. Now, you can easily change the radius, fill color, and color of a selected shape. (video: 1:28 min.) Use grip tools to edit and work with a selection. Now you can edit a shape or control its properties from a single click. (video: 1:34 min.) Now you can use the Picker tool to choose a shape from a list, rather than to open it from the drawing window. Use the Picker tool to choose the shape you want, and then click to place it on the canvas. (video: 1:45 min.) The Select tool can now select an object by dragging the edge of the selection to define the object's start point. Now you can zoom a layout to fit the entire drawing area without scaling. (video: 1:48 min.) The Floating Region tool lets you edit overlapping drawings on the canvas without having to make the drawings a single object. Use a Dynamic floating region to create a variable size layout that can adapt to the drawing's size. (video: 1:22 min.) The floating region is more useful when you work with a CAD file or with many overlapping drawings. Use the floating region to create a variable-sized region on the canvas. You can drag the edge of the floating region to quickly adjust the region's size. (video: 1:26 min.) Show the region you are editing, and the region you are working on.
